

Specifying a Pickup Location

Today the option to specify more precisely the location of a pickup has been introduced. This feature is useful when the pickup location is unclear from the address, such as when the shipping address is a large warehouse complex.

The image shows a user interface for booking a pickup. At the top left is a truck icon. The main heading is "Book a Pickup" with a help icon. Below this, the form displays: "Book a Pickup on 2015-06-30 between 16:00 and 17:00". Underneath, there are two dropdown menus: "Building" and "Description 101". To the right is a "Location" dropdown menu which is currently open, showing options: "None", "Front", "Rear", and "Side". The "Front" option is highlighted in green. A "CONFIRM" button is located at the bottom left of the form area.

Different couriers have different and competing mechanisms for specifying this data so the options available will change depending on which carrier the shipment was submitted to.
